## **WORLD HEALTH ORGANIZATION certifies SRI LANKA malaria-free**

### **A remarkable public health achievement**

PARIS - COLOMBO, 05.09.2016, 15:48 Time

**USPA NEWS** - The next statement was made in Colombo on September 5, 2016 by WHO Regional Office for South East Asia :

In a remarkable public health achievement, Sri Lanka was today certified by WHO on having eliminated malaria, a life-threatening disease which long affected the island country.

The next statement was made in Colombo on September 5, 2016 by WHO Regional Office for South East Asia :

In a remarkable public health achievement, Sri Lanka was today certified by WHO on having eliminated malaria, a life-threatening disease which long affected the island country.

'Sri Lanka's achievement is truly remarkable. In the mid-20th century it was among the most malaria-affected countries, but now it is malaria-free. This is testament to the courage and vision of its leaders, and signifies the great leaps that can be made when targeted action is taken.'

'It also demonstrates the importance of grass-roots community engagement and a whole-of-society approach when it comes to making dramatic public health gains,' WHO Regional Director, Dr Poonam Khetrapal Singh, said here.

Sri Lanka's road to elimination was tough, and demanded well-calibrated, responsive policies. After malaria cases soared in the 1970s and 80s, in the 1990s the country's anti-malaria campaign adjusted its strategy to intensively target the parasite in addition to targeting the mosquito.

The change in strategy was unorthodox, but highly effective. Mobile malaria clinics in high transmission areas meant that prompt and effective treatment could reduce the parasite reservoir and the possibility of further transmission. Effective surveillance, community engagement and health education, meanwhile, enhanced the ability of authorities to respond, and mobilized popular support for the campaign.

The adaptation/ flexibility of strategies and support from key partners such as WHO and the Global Fund to Fight AIDS, Tuberculosis and Malaria fast-tracked success. By 2006, the country recorded less than 1 000 cases of malaria per year, and since October 2012, the indigenous cases were down to zero. For the past three-and-a-half years, no locally transmitted cases have been recorded.

To maintain elimination and ensure the parasite is not reintroduced to the country, the anti-malaria campaign is working closely with local authorities and international partners to maintain surveillance and response capacity and to screen high-risk populations entering the country.

Sri Lanka is the second country in the WHO South-East Asia Region to eliminate malaria after Maldives. The announcement of Sri Lanka's victory over malaria was made at the WHO South-East Asia Region's annual Regional Committee meeting in the presence of health ministers and senior health officials from all 11 Member States.

The Regional Director said WHO will continue to support the efforts of Sri Lanka's health authorities as they relate to malaria, as well as the country's wider public health mission. This outstanding achievement should be a springboard to further public health gains in the country and the South-East Asia Region as a whole.
